

We need your help on the issue of compensator and the Standard Division of IPSC.

**1. Standard Division prohibits compensators. If I have an attachment extending forward of the barrel & slide of my gun, but there are no holes in the attachment other the hole in the barrel from which the bullet exits, is this legal?**

No. A weight attached to the end of the muzzle is still deemed to be a compensator, even if it does not have holes.

I would like to have your official decision on the following handguns for the Standard Division:

April 21 2015

Dear Jose.

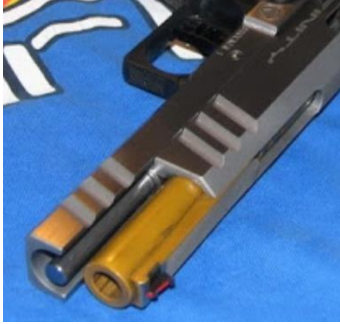

During our IPSC Executive meeting your request for clarification was brought up this is the outcome.

1. STI Apeiro **APPROVED**

It uses a hybrid Barrel.

2. Limcat Custom I **APPROVED**

Same barrel as the STI Apeiro **APPROVED**

3. Limcat Custom II **NOT APPROVED**

4. Brazilian Custom I – Alpha Tracker **NOT APPROVED**

5. Brazilian Custom II **NOT APPROVED**

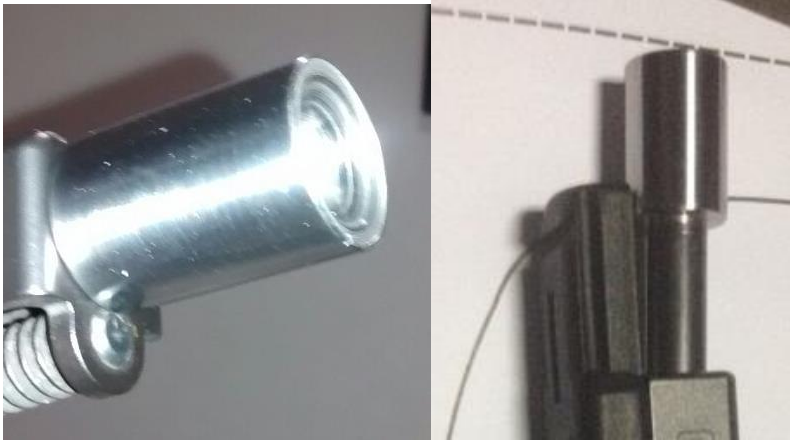

6. Brazilian Custom III **APPROVED**

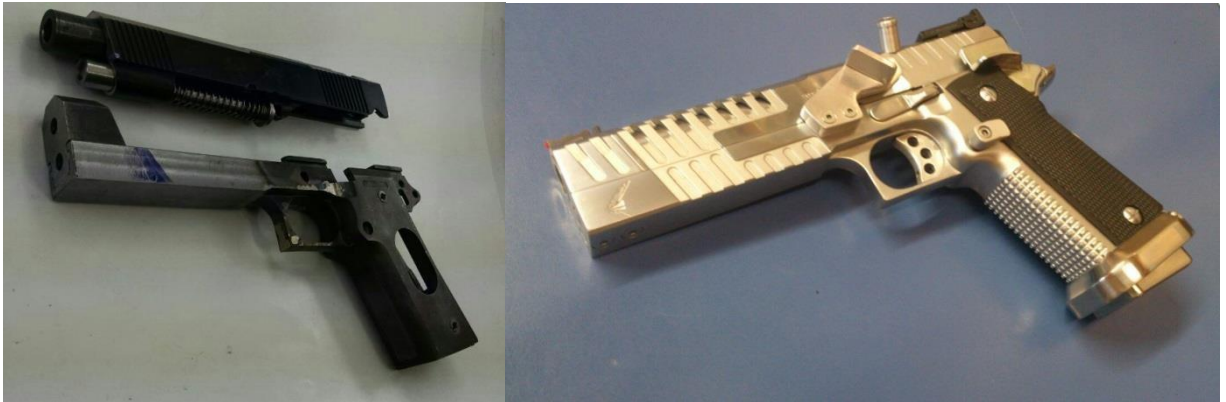

A weight is attached at the frame

7. Brazilian Custom IV **NOT APPROVED**

8. Brazilian Custom V – Weight at the Frame **APPROVED**

These two pictures are the same gun.

9. Brazilian Custom VI **NOT APPROVED**

10. Brazilian Custom VII **NOT APPROVED**

11. Tungsten Sleeved Barrel **APPROVED**

12. Brazilian Custom VIII **APPROVED**

12 Brazilian Custom IX **NOT APPROVED**
